

AFTER SCHOOL STEAM CLASSES

WHERE FUN MEETS TECH

Robot Coding Starter Lab (Grades 1st-3rd)

We've got a lab full of robots who keep asking to get to know our younger students! In this class, we introduce student to programming principles by using our codable robots. And we roll in a lot of creative run - like using our Thymio robots to imitate animals and our Dash robots to compete in obstacle course races. It's a wonderful mix of robots, coding, and creativity that both girls and boys love.

Tuesdays 9/4 to 12/11, 2:40 - 3:40pm

(14 week session, \$465) *No class: 11/20

Code with Circuits (4th-5th grade)

An electrifying semester of fun for your maker in the making! It's all about gadgets and gizmos. If your student enjoys physically creating circuits with their own two hands and using their imagination to come up with novel inventions, then this is the class for them. Not only will students learn the basics of working with electronic components, they'll also build with them and learn how to code them using an Arduino microcontroller. REAL components, REAL breadboards, and REAL fun!

Fridays 9/7 to 12/14, 3:00 - 4:30pm,

(13 week session, \$510) *No class: 10/5, 11/23
